

ACTIVE COST REDUCTION CAPABILITY

The *GeoMetrix 16 Performance Suite* provides complete cost visibility on all your railcar assets. Whether you own or lease your rolling stock, *GeoMetrix 16* lets you profile every railcar in both aggregate and individual terms. Beyond cost optimization, *GeoMetrix's* Railcar module also provides audit capability for railroad and leasing companies.

“

GeoMetrix is more than a rail tracking software. It takes fleet management to a whole new level.

”

BASIC METALS SHIPPER
400 Railcars

GEOMETRIX 16'S RAILCAR MODULE includes the same detail review capability as all other modules. The consistent Review Screen format allows users to quickly focus on priority metrics and alerts to get the same 'performance at a glance' benefit that makes *GeoMetrix* so user friendly.

In addition, *GeoMetrix's* Railcar module provides immediate visibility on individual asset profiles, leasing terms, service details and assignments.

Profile

Now you can review cost / benefit detail on individual railcars including trip information, lease terms, service dates and costs as well as mechanical details. *GeoMetrix* Railcar allows users to record railcar-specific notes as well.

With detailed information on repair and storage costs available for easy reference, users can maintain a more complete 'cost of

operation profile' on their railcar assets.

Leasing

GeoMetrix's Railcar module enables you to prioritize negotiations for individual renewals and fleet railcar leases with a date ordering of pending lease expirations.

List railcar assets and leases by a variety of lease details including lessor, term, type, mileage allowances, rates and other contract riders to ensure your contracts are organized and up to date.

Service & Repairs

Accommodating planned maintenance in operational schedules can be challenging, but users can improve visibility and reduce error with *GeoMetrix's* date ordering of pending service requirements.

Maintaining accurate cost information, for planned and unplanned maintenance, is simplified with the ability to upload Billing Repair Card (BRC) information directly from repair

Complete Railcar Asset Management

shops to the *GeoMetrix* Railcar module.

Integrated, detailed service and repair information can help identify issues with individual railcars and fleets as well as repair shops.

Fleet Management

Managing railcar assignments is reduced to a few simple mouse clicks in the *GeoMetrix* Railcar module.

Manifest and unit train operations are much easier to track and evaluate with the ability to change fleet assignments and other, user-defined characteristics.

With 'drag and drop' ease, users can create new sub-fleets or assign multiple railcars to new fleets or base stations in a single action. Now fleet changes can be made quickly and accurately, reviewed for optimization and changed again as results warrant.

Storage

GeoMetrix Railcar simplifies fleet storage management by calculating the storage days and costs for each railcar in any of your storage sites. User-defined auto alerts let you know when to add or remove cars from storage, helping you manage both short and long term storage requirements.

Mechanical & Inspections

GeoMetrix gives you maximum flexibility in connecting your yard to your systems. The Railcar module is designed to accept UMLER mechanical data for railcars and maintain that information for reporting and loading purposes.

Meeting regulated inspection requirements is also simplified with our 'ruggedized' tablets that contain a camera, barcode scanner, GPS, cellular, WiFi and Bluetooth capabilities. Crews can perform railcar inspections easily and reliably, then store the inspection reports – including photographs – for reporting and audit purposes.

Performance Measurement

GeoMetrix's Report Wizard allows logistics managers and senior executives to transform comprehensive 'granular' information into meaningful intelligence for fleet performance management.

Users can select from 25 key categories to build client-specific reports at their desired frequency.

Cost of service and capacity utilization can be dramatically improved simply by having the right information available in the right format at the right time.

GeoMetrix lets logistics managers or senior executives quickly view and assess key performance indicators to make better railcar asset management decisions.
